

Addressing Tech-Enabled Abuse

1-Day Training Curriculum by EndTab.org

Cost to attend: \$15

Topeka Shawnee County Public Library

October 8, 2024 9:30-4:30

Doors open at 9.

Lunch included.

Topic 1: Emerging Issues in Digital Safety Here we demystify the latest challenges faced by victims and how anyone can identify, prevent and address them before they become mainstream. In this session, we cover doxxing, fake nudes, AirTags, stalkerware and smart-home abuse.

Topic 2: Tech-Savvy Advocacy Here we will discuss verifying and addressing common forms of tech-enabled abuse including unauthorized account and device access, online harassment, impersonation, nonconsensual tracking, online dating violence and more.

Topic 3: Tech-Savvy Prevention: Safety Planning and Community Action Here we cover how to update existing screening and safety planning practices to be effective in online spaces and on devices. This includes identifying red flags, screening/intake best practices, how to disappear online, identifying a victim's digital footprint and quickly securing accounts and apps. We will also cover effective strategies for community-based prevention, like online bystander intervention practices and healthy relationships education for digital spaces.

Topic 4: The Evolving Image-Based Sexual Abuse Landscape Here we will explore how to identify, prevent and respond to the nonconsensual distribution of intimate images, pressure for nude images, sextortion, cyberflashing, fake nude images and deepfakes - along with safer sexting best practices.

Topic 5: Understanding and Navigating Tech-Enabled Trauma By understanding the differences between online and offline trauma, we can meet modern victims where they are, mitigate re-traumatization, address online victim-blaming, and inform our trauma-informed approaches to be more effective in online spaces.

About EndTAB: Abuse has gone digital. Today, we are spending more time online and on our devices than ever before, which has created new safety risks for youth, victims of gender-based violence and others. As such, it has become increasingly important to develop skills that prioritize our digital safety. EndTAB's interactive and engaging courses make it possible to quickly empower attendees to navigate the digital gender-based violence landscape and help others stay safe.
